

## **Congratulations on your new Planmeca Intraoral Scanner!**

### **Below are important details regarding your upcoming in-office training:**

To help you get the most out of your training, we highly recommend that each person involved complete the Scan and Send Pre-Training Videos prior to the onsite training day. You can access this training at [Scan and Send Pre-Training link](#) and [Quiz](#) for one CE.

It is a top priority to us to ensure your success. We require a limit of 4 people on your training day due to the amount of equipment available within the practice. \*\*If you need additional staff trained, please let us know in advance so we can make proper accommodations to ensure the team is confident with your Planmeca product.

If you haven't already, please contact your lab(s) to determine if they prefer to receive digital impression on their own portal, the Planmeca Romexis® LabApp (free for the lab to download [HERE](#)), or by e-mail. It is ideal if you can provide the lab information to me prior to the training day. There are several solutions and file types available.

You will want to consider purchasing additional items through your dental supplier to improve the patient experience. Here are a few recommendations:

- Optical wipes for cleaning scanner tip mirror, as needed
- Cheek and lip retractors:
  - OptraGate® by Ivoclar Vivadent, Comfort View® by Premier, and Lingua-Fix® by Zirc
- Gingival retraction for tissue management:
  - Traxodent® by Premier, 3M™ Astringent Retraction Paste, laser, or cord (sizes 00, 0, or 1)

### **Training Agenda**

7:45 am - Trainer arrives

8:00 am - Software, hardware, sterilization, hands-on scanning

10:30 am - Patient 1 – Pre-prepped crown, single implant site, or full arch for orthotic or sleep appliance

11:30 am - Patient 2 – Pre-prepped crown, single implant site, or full arch for orthotic or sleep appliance
