CAUTION!

Please refer to the “Technical Specifications” document to locate the various cut-outs of your configuration and note that this document contains only a general representation of the modules, some details may differ.
INTRODUCTION

This document contains all the necessary information for the pre-assembly of the Steri-Center SCX5. Look carefully at the various steps to ensure the process is done right and pay attention to the instructions in bold.

Note: The information in this manual resumes the whole process of the pre-assembly of the Steri-Center SCX5. If, at any of the steps, there are differences between the manual and the local building codes, the latter will always take precedence. For more details, please contact Triangle Furniture Systems.

To provide the latest, most up to date products, Triangle can make changes without further notice. However, all the efforts will be applied to update the instructions as quickly as possible.

Before starting the install, the technician or entrepreneur must analyze the composition and the strength of the floor (concrete or wood), verify if a wall anchor is mandatory and finally, inspect the composition and strength of the wall (gypsum board, concrete or wooden material).
**OUTLET 1** | 120V / 210V | 20A | YES | YES | Steriliser (See manufacturer specs.)
**OUTLET 2** | 120V | 20A | YES | YES | Statim® (See manufacturer specs.)
**OUTLET 3** | 120V | 20A | NO | NO | Sterile storage fan
**OUTLET 4** | 120V | 20A | NO | NO | Accessory outlet
## OUTLET 1
- Voltage: 120V
- Amperage: 20A
- Isolated: NO
- GFCI: NO
- Use: Ultrasonic cleaner

## OUTLET 2
- Voltage: 120V
- Amperage: 20A
- Isolated: NO
- GFCI: NO
- Use: Accessory outlet
The rough-in must be at 4” for every plumbing service entry.

If there is a thermal disinfector, see next page!
If there is a thermal disinfector, the access to the services takes place in the cut-out N° 3 and N° 5.
If there is a thermal disinfector, the access to the services takes place in the cut-out N°3 and N°5.
REQUIREMENTS

1. Plumbing

1.1 Water
Hot and cold water supplies are required with a pressure between **40 and 130 psi** (300-900 kPa / 3 to 9 bar) and a minimal outflow of **1.05 gal/min** (4L/min).

1.2 Drain
The sink needs to be connected to a standard drain.

1.3 Air (according to options)
The Steri-Center SCX5 has a 3/8” O.D. compression fitting. The air entry has to have an air pressure between 550-900 kPa (5.5-9 bar / 80-130 psi) and an outflow of at least 55L/min. The connection to the regulator takes place in the sink module. The regulator is preset at **65 psi**.

1.4 Suction
The Steri-Center SCX5 comes with a 1/2” O.D. tubing to connect the suction head to the pump.

2. Electricity

2.1 Electrical wiring
A **120 VAC / 20 A** entry is required to connect the primary junction box. And, according to the options selected, other entries might be needed.
